

Deploy a Robust Physician & Patient Portal and Provide a Clearer Picture of Patient Care in Less Than 30 Days

Mach7's Physician & Patient Portal delivers consolidated access to cross-specialty patient data and images from any Internet-aware access point.

Physician and patient portals have the ability to move the conversation about care beyond the exam room. From referring physicians, clinicians, and general practitioners, to patients, portals help ensure that multi-directional communication about patient care is front and center. Portals open and expand lines of communication about patient care and have the power to deliver more than lab results and online appointment scheduling. General and referring physicians can begin communicating on more clinical topics and can access and share patient information in a clinically relevant way, customized by specialty and audience. Patients can continue conversations with their physicians and access care records between face-to-face visits.

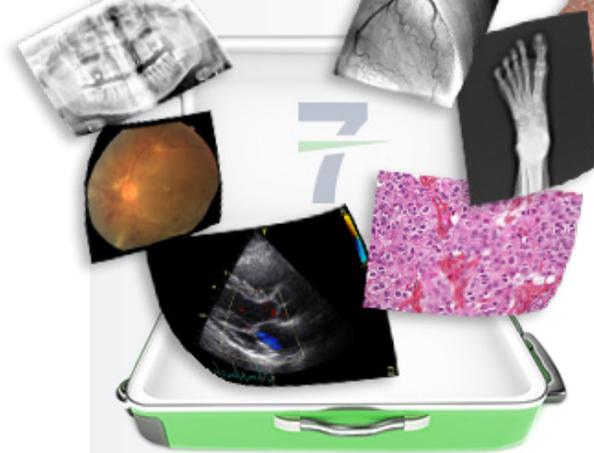

Access and Share Patient Data from Any Location

Visibility into a comprehensive patient care record, including images, is here with Mach7's Physician & Patient Portal. The Portal offers physicians access to cross-specialty patient data from any Internet-aware access point. Physicians can visually browse entire groups of patient records using tiled and color-coded thumbnails, then select, group, and examine records using existing or custom workflows. Complete patient histories are available including labs, medications, allergies, cross-specialty images, reports, and clinical notes, all synchronized and organized for rapid review and decision support.

Leveraging the Portal's universal zero-footprint viewer, patients and physicians can access and share medical images and data over the web regardless of the media format (e.g., DICOM and non-DICOM images). Organizations also have the option to integrate their diagnostic viewer for physicians to view DICOM images.

An Intuitive Web-based Solution

Mach7's customizable, intuitive, and highly visual Physician & Patient Portal offers easy access and sharing of patient data. This compact, zero-footprint solution runs entirely within a web browser and requires no download or installation of applications. Physicians and patients can quickly and securely share information using intuitive tools including email and secure time-sensitive web URLs. Portal interfaces are tuned to each user's specific needs and provide visual cues for searching and selecting patient data. From image viewing to email, referring physicians, diagnosing clinicians, administrators, and patients can now access and share a complete care record and stay engaged throughout the care continuum.

MACH7
TECHNOLOGIES
Unlock. Unleash. UnPAC.

Mach7 Physician & Patient Portal keeps referring physicians, general practitioners, clinicians, and patients connected and engaged with a comprehensive and transparent view of patient data where and when it is needed.

- » **Intuitive Visual User Interface** – Quickly access and share patient data.
- » **Web-based Solution** – Compact, low-maintenance solution that runs entirely within a web browser and requires no download or installation.
- » **Secure Access** – User-specific permissions ensure that only authorized users can view images and patient data. All access uses HTTPS secure protocols.
- » **Thumbnail Viewing** – Designed for use on mobile devices (i.e., touch screen support), access patient and procedure data through a tile-based user interface.
- » **Simple Sharing and Communication Tools** – Physicians and patients can easily share information using intuitive tools including email and secure-time sensitive web URLs.

Mach7 Physician & Patient Portal keeps physicians and patients connected and engaged with a comprehensive and transparent view of patient data where and when it is needed.

Meet Meaningful Use Patient Engagement Requirements

MU2 requires that 50% of patients sign up for a patient portal and 5% use it. An expanded list of patient portal functionality required under the MU2 criterion includes electronic delivery of health information, along with education, reminders, secure electronic messaging, and patient record reviewing. Mach7's Physician & Patient Portal helps you meet MU2 requirements and keeps patients engaged in their care. Designed to support touch screen devices and mobile platforms, the Physician & Patient Portal puts patient information in the hands of general practitioners, referring physicians, clinicians, and patients when and where they need access.

Mach7 Physician & Patient Portal provides physicians and patients access to health information and delivers the tools to electronically communicate and share patient information—both critical to delivering patient-centered healthcare.

In the field, across town, or down the hall, IT professionals, referring physicians, diagnosing clinicians, and patients can now access and share medical records, images, drug information, medical history, and patient healthcare intelligence across the full patient care continuum – all through the most technically advanced and intuitive interface available.

Mach7 Physician & Patient Portal accelerates care delivery and centralizes access across the enterprise:

- » Facilitate cross-enterprise patient information access and sharing, improve diagnostic efficiency.
- » Universally share and access medical imaging data from a cross-platform zero-footprint solution designed for modern mobile devices.
- » Engage patients and create an environment that facilitates patient data sharing and two-way physician-patient communication across the care continuum.
- » Easily view, and manage both DICOM and non-DICOM media.
- » Access, view and share patient imaging data from a mobile, Internet-aware smart device.

Get a clear picture of patient data in just 30 days - Let us prove it to you. With our award-winning platform you can deliver a robust Physician & Patient Portal allowing secure access to image-rich patient records across your healthcare enterprise in less than 30 days.
