
Mach7 Expands Business in Qatar

Melbourne, Australia; 23 August 2018: Mach7 Technologies Limited (ASX:M7T), a company specialising in innovative data management solutions for healthcare providers, today announced Hamad Medical Corporation (HMC) has added Mach7's Business Continuity Solution (BCS) to its existing Mach7 clinical imaging platform solution, enhancing uptime and strengthening the foundation of its national clinical imaging platform.

The implementation of Mach7's BCS will allow HMC to maintain zero-downtime when providing access to critical clinical systems and records. In addition to the BCS order, Mach7 has recently received orders from HMC and Sidra Medical and Research Centre (Sidra) for technical support of the data services platforms. With these new orders Mach7 expects to recognise revenues from Qatar of at least \$1.4 million in the current financial year, with a large proportion of this recurring annually thereafter.

Mach7's Data Services Platform currently manages more than 20 million images (90+%) of Qatar's clinical imaging requirements. HMC announced last year that it had developed a national clinical imaging platform, powered by Mach7, which enables digital images such as x-rays and MRI scans to be shared among all healthcare providers in the country. This national clinical imaging platform brings together patient imaging data from various medical specialties into a single clinical repository enabling enterprise sharing with other healthcare providers, including Primary Health Care Corporation (PHCC) and Sidra. The imaging platform investment is expected to reduce the need for repeat examinations by up to 25%.

Going forward, Mach7 is well positioned to provide additional solutions enabling patientcare workflows for overseas treatment and remote consultations, helping providers to meet their vision of providing all patients with the safest, most effective and most compassionate care.

About Mach7 Technologies

Mach7 Technologies (ASX:M7T) develops a secure data services platform that improves business, operational and patient outcomes. Mach7 provides an interoperable foundation to manage patient data and host an ecosystem of apps. Deliver solutions including PACS, enterprise imaging workflows, vendor neutral archiving (VNA), artificial intelligence (AI), clinical portals and care coordination. Reimagine, redefine, and reconstruct the best solution to connect and exchange health information without boundaries. Work smart with Mach7 in the cloud or onsite. Contact us to learn more.
