

Sentara Healthcare Selects Mach7 as PACS Vendor of Choice

Melbourne, Australia; 5 November 2018: Mach7 Technologies Limited (ASX:M7T), a company specialising in innovative data management solutions for healthcare providers, today announced it has been selected, together with Client Outlook, Inc., as the vendor of choice for Sentara Healthcare's Picture Archive Communication System (PACS) modernisation project. Sentara will incorporate Mach7's Diagnostic Studio and Client Outlook's eUnity radiology reading functionality for this PACS project.

With the goal of modernising their PACS through a reconstructed architecture, Sentara selected Mach7 after a tender process that included exhaustive review of the top PACS vendors in the industry.

This project builds on an existing partnership that started in 2014, when Sentara implemented Mach7's vendor neutral archive (VNA) across its facilities in Virginia and northeast North Carolina. Mach7 is currently supporting Sentara with the migration from five separate PACS systems into its VNA. Today's announcement marks yet another milestone in the partnership as Sentara and Mach7 continue collaborating to build the foundation for a best-in-class, modernised imaging platform.

Sentara forecasts substantial annual cost savings from Mach7's and eUnity's diagnostic capabilities. The combined solution will integrate with Sentara's other systems to improve medical imaging fluidity across sites and increase radiology and clinician workflow efficiency, resulting in better patient care.

"Mach7 and Client Outlook provide the architectures that enable us to choose the most advanced and innovative technologies," said Trent Conwell, Information Technology Director, Sentara Healthcare. "With a proven data platform, solid enterprise viewer, and efficient, seamless migration process, Mach7 and Client Outlook have helped Sentara develop our vision of an evolutionary clinical IT ecosystem."

"Sentara Healthcare has been more than a client to Mach7," said Mike Jackman, CEO, Mach7. "Sentara shares our commitment to innovation and developing solutions that empower physicians and radiologists to access the clinical data they need when and where they need it to support optimal patient care. We are thrilled to continue to grow our relationship with a health system that shares our vision of what next-generation healthcare technology can and should be."

Solidifying the companies' shared long-term commitment to imaging system modernisation, the agreement also includes a luminary site designation that will drive continued innovation and evolution of imaging platforms. The luminary site designation includes a Clinical Advisory Board and establishment of an Imaging Innovations Lab at Sentara's facility. The Lab will maintain the necessary infrastructure to support a modernized PACS platform.

Mach7 and Sentara will proceed to contracting stage. Whilst the contract values are not yet finalised, it is expected this contract will include a subscription license, adding to Mach7's existing contracted recurring revenue.

About Sentara Healthcare:

Sentara Healthcare is a Virginia-based not-for-profit health system which includes 12 hospitals, more than 1000 physicians and 3800 medical providers. For more than a decade, *Modern Healthcare* magazine has ranked Sentara as one of America's top integrated healthcare systems, which includes advanced imaging centers, nursing and assisted-living centers, outpatient campuses, physical therapy and rehabilitation services, home health and a hospice agency.

About Mach7 Technologies:

Mach7 Technologies (ASX:M7T) develops innovative data management solutions that create a clear and complete view of the patient to inform diagnosis, reduce care delivery delays and costs, and improve patient outcomes. Mach7's award-winning enterprise imaging platform provides a vendor neutral foundation for unstructured data consolidation and communication to power interoperability and enables healthcare enterprises to build their best-of-breed clinical ecosystems. Mach7's sophisticated workflow tools, advanced clinical viewing and optimized vendor neutral archiving solutions unlock silos of legacy systems empowering healthcare providers to own, access and share patient data without boundaries.
